LeetCode: leetcode.com/shaikkabeeruddin

Career Objective

To contribute to EA's Site Reliability Engineering team by leveraging expertise in cloud platforms, automation, CI/CD, and monitoring to enhance service reliability, scalability, and performance.

Education

B.Tech in Artificial Intelligence & Data Science, SRKR Engineering College, Bhimavaram (2022-2026), CGPA: 8.77

Technical Skills

- Programming & Scripting: Python, Bash, SQL, C, C++, Java
- Cloud Platforms: AWS, Azure, GCP, Docker, Kubernetes
- Infrastructure as Code: Terraform, Helm, Ansible, Puppet
- Monitoring Tools: Prometheus, Grafana, Loki, Datadog, AWS CloudWatch
- Databases: MySQL, PostgreSQL, MongoDB, NoSQL
- CI/CD: Jenkins, GitHub Actions, GitLab CI
- OS & Networking: Linux/Unix administration, DNS, firewalls, load balancing

Internship Experience

- NIELT Internship (May-Aug 2024): Developed ML model for spacecraft structural health monitoring (90% accuracy). Built movie recommendation system using collaborative filtering in Python.

Projects

- CI/CD Pipeline Automation: Designed Jenkins pipelines for automated builds and deployments; reduced manual effort by 40%.
- Kubernetes Cluster Deployment: Deployed containerized applications on Kubernetes with Helm charts; improved scalability and fault tolerance.
- Cloud Infrastructure Monitoring: Configured Prometheus + Grafana dashboards with AWS CloudWatch metrics; improved incident response time by 25%.
- Infrastructure as Code: Automated provisioning of cloud resources using Terraform and Ansible; reduced setup time by 50%.
- Serverless Data Processing: Built ETL workflows using AWS Lambda + S3; automated ingestion of large datasets.
- Distributed Logging System: Implemented centralized logging with Loki + Grafana; enhanced observability across microservices.
- Reliability Engineering: Defined SLIs/SLOs for simulated production workloads; improved system uptime by 15%.
- AI-Powered Incident Response: Built Python scripts integrated with monitoring alerts to auto-resolve common issues.
- Flight Delay Prediction: Developed ML model using historical flight data; reduced error rate by 25%.
- TapaathiAI Workflow Automation: Automated repetitive workflows using Selenium and scripting; reduced manual effort by 60%.

Achievements

- Ranked consistently in top 5% of academics.
- Active participant on coding platforms (LeetCode, GitHub).

Soft Skills

- Communication, Collaboration, Problem-solving, Analytical Thinking, Adaptability, Attention to Detail

Languages

- English, Telugu, Hindi
